High Point, N.C. – Dec. 17, 2019 –Thomas Built Buses Inc (TBB) has been selected as the provider of all 50 electric school buses allocated for the initial phase of Dominion Energy's electric school bus replacement program in Virginia. The program represents the largest deployment of electric school buses in the United States.

"We are thrilled to lead the way in this groundbreaking initiative that is paving the way for a cleaner future and setting the bar for future electric vehicle conversions across the country," said Caley Ederly, president and CEO of Thomas Built Buses. "We believe electric school buses to be the future of pupil transportation. They offer quieter operation, lower operating costs and zero emissions to the benefit of students, parents, school districts and local communities."

TBB's all-electric Saf-T-Liner C2 Jouley is equipped with the same vehicle quality, durability, performance, safety and comfort as the popular Saf-T-Liner C2. Jouley is powered by Proterra electric vehicle technology and configured with 220 kWh of total energy capacity, a two-speed transmission and a TBB-estimated operating range of up to 134 miles. TBB is the only school bus manufacturer to offer DC fast charging architecture as standard equipment. Jouley can charge in about three hours with the Proterra 60kW DC fast charging system and can supply power back to the power grid using vehicle to grid (V2G) technology.

TBB offers electrical infrastructure project management and a comprehensive turnkey solution for EV integration. Known as the [Electric Bus Authority Program](#), Thomas Built Buses works one-on-one with customers through the entire EV planning and implementation process.

"As Virginia's exclusive Thomas Built Buses dealer, Sonny Merryman is thrilled with the opportunity to partner with Dominion Energy," said Floyd Merryman, president and CEO of Sonny Merryman. "Our team has always prided ourselves as innovation leaders in pupil transportation. This particular initiative is especially exciting not just for us but also for Virginia's students and our many loyal partners across the Commonwealth's public education community. Electric vehicles are the wave of the future, and we anxiously look forward to bringing this transformative project to a successful reality."

"Electric school buses remain one of the best applications for electric vehicle technology," said Proterra CEO Ryan Popple. "The all-electric Jouley incorporates Proterra's highest standards of battery safety and validation along with industry-leading onboard energy storage for electric school bus fleets."

In addition to building safe, quality and innovative school buses, TBB is dedicated to continually improving its product and support as the popularity of electric vehicles advances. Through partnerships with Daimler, Daimler Trucks North America LLC and Proterra, a leading innovator in heavy-duty electric transportation with more than ten million miles of service in the transit industry, Thomas Built Buses is on the

cutting edge of all new EV innovations. TBB's customers continue to benefit from the latest innovations and a level of service and support unparalleled in the industry.
