PORTLAND, Ore. – May 14, 2020 – Daimler Trucks North America (DTNA) is expanding its suite of service technology and customer solutions with the rollout of Techlane, Service Pre-Authorization, and TechAssist this year. These enhancements to DTNA’s service process are designed to increase technician efficiency and service bay throughput, complementing network capacity gained through recent dealership expansions, and helping to propel DTNA closer to its goal of 24-hour maximum repair turnaround and uptime for all Freightliner, Western Star, FCCC and Thomas Built Buses customers.

“With investments in new technologies like Techlane and TechAssist, we estimate that we could see as much as a 20 percent gain in technician efficiency at many dealer locations,” said Paul Romanaggi, Chief Customer Experience Officer of DTNA. “And with the addition of Pre-Auth to our service products, we eliminate communication lag that could make the difference between a 4-hour versus next-day repair. It’s all about maximizing uptime. DTNA understands this, and so do our dealers. That’s why we’re not taking our foot off of the pedal to deliver new digital service solutions, especially now that so many people rely on our vehicles to keep the world moving.”

New to the Uptime Management Suite, Techlane leverages DTNA’s big data analytics including warranty repair history in connection with fault codes logged during a repair event to provide the technician with a jumpstart in the diagnostic process. The application provides specific guided diagnostics to verify identified components during testing by the technician, as well as an interface to the vehicle’s electronic systems through DTNA’s proprietary diagnostic tool, DiagnosticLink. Techlane will also automatically log the data from each repair into the “technician’s story” in the background, to further inform future repairs across DTNA’s dealer network and eliminate the need for the Tech to write a summary of the repair. Techlane was rolled out in a pilot phase in February 2020 at six dealer locations as part of a joint development process, with plans for deployment across DTNA’s dealer network later this year.

New to Pinnacle Fleet Solutions, the Service Pre-Authorization feature automates the repair approval process to reduce communication lag during a service event. When a fleet enrolls in this service, they establish a repair-cost threshold by dealer, under which repairs will proceed without the need for additional authorization. After the repair order is completed, the dealer submits the invoice to Pinnacle for the customer to finalize – a process that previously needed to be coordinated and completed before the vehicle service could occur. DTNA’s Pre-Authorization program launched in January 2020, and currently has over 280 dealers enrolled to support their customers. Customers can sign up with any participating dealer today.

“Service Pre-Authorization and Techlane have brought a new level of efficiency to our service operations, dramatically improving our customer experience by reducing the amount of time their vehicles spend in our shops for repair,” said Scott Zeppenfeldt, Senior Vice President of Operations, Velocity Truck Centers.

Coming later this year, TechAssist is a voice controlled smartphone app designed to improve technician efficiency by providing audible step-

by-step instructions on how to perform repair operations, leaving technicians' eyes and hands on the repair job. Conceptualized during a Hackathon sponsored by DTNA in Austin, Texas in 2019, the winning team started the company Reinforce Inc., and is actively engaged with DTNA to bring this application to the dealer network.

ABOUT DAIMLER TRUCKS NORTH AMERICA

Daimler Trucks North America LLC, headquartered in Portland, Oregon, is the leading heavy-duty truck manufacturer in North America. Daimler Trucks North America produces and markets commercial vehicles under the Freightliner, Western Star and Thomas Built Buses nameplates. Daimler Trucks North America is a Daimler company, the world's leading commercial vehicle manufacturer.
